

KOCH CURVE

Start with a line segment $p_0 p_f$, where $p_0 = (x_0, y_0)$ and $p_f = (x_f, y_f)$

Replace line segment $p_0 p_f$ with

three segments: $p_0 p_c$, $p_c p_2$, $p_2 p_1$, $p_1 p_f$

p_0 and p_f are given.

Calculate $p_c = (x_c, y_c) = \left(\frac{1}{3}(x_f - x_0), \frac{1}{3}(y_f - y_0) \right)$
 $p_1 = (x_1, y_1) = \left(\frac{1}{3}(x_f - x_0), \frac{2}{3}(y_f - y_0) \right)$
 p_2 as calculated below.

Given a center of rotation, (x_c, y_c) , rotate another point (x_1, y_1) by Θ degrees, the equations for the new point (x_2, y_2) are given above. See

<http://stackoverflow.com/questions/12161277/how-to-rotate-a-vertex-around-a-certain-point>

$$x_2 = x_c + (x_1 - x_c) * \cos \Theta - (y_1 - y_c) * \sin \Theta$$

$$y_2 = y_c + (x_1 - x_c) * \sin \Theta + (y_1 - y_c) * \cos \Theta$$

$\Theta = 60$ degrees:

$$\cos(60^\circ) = \frac{1}{2}$$

$$\sin(60^\circ) = \frac{\sqrt{3}}{2}$$
